

KONICA MINOLTA

I WANT TO SIMPLIFY MY DAILY WORK

✎ The solution for lawyers that secures your data and saves you time

Wouldn't it be helpful if a multifunctional system could adapt to your daily work routines and save you time for more important jobs? We have designed the bizhub LEGAL as a multifunctional system that fits and facilitates your business processes. The key benefits are proven data security, ease of use and functions designed for your needs. With the bizhub LEGAL you'll have more time to concentrate on your clients.

IMPROVING
LEGAL WORKFLOWS

bizhub LEGAL

▀ Specially designed for you – the bizhub LEGAL

Can the display of a multifunctional device actually help you speed up tedious work processes? Yes it can – if key lawyer-specific functions are shown on the operating display. We analysed the scanning and copying behaviour of legal professionals and talked to lawyers about their needs in areas such as effectiveness, security and compliance. As a result, we have created services that meet your needs as a lawyer and integrated them into a device specially designed for law firms: the bizhub LEGAL.

This bizhub LEGAL will assist you in your everyday work and ensure more efficient document management. Easy to use, secure, functional and ideally suited to your needs, it will speed up all your document handling.

▀ Customised functions

Ease of use and enhanced productivity

The bizhub LEGAL is very easy to use and offers single-click processing of the different kinds of lawyer-specific documents and functions – for example, digitally storing documents, sending digital files to your clients or receiving a printout.

What's more, this device can be deeply integrated into your existing document locations. For example, it enables you to directly browse through your folders as if you were working from your laptop or desktop computer. And you can scan your documents straight to the right client folders and libraries. All this will leave you much more time for your core tasks.

Your daily work involves devoting most of your attention to documents and correspondence. Thanks to the bizhub LEGAL you can directly scan documents into editable file

formats. And that saves you or your assistant all the effort of retyping content. The bizhub LEGAL also allows you to create document files in the PDF/A-1a format, which offers the highest possible conformity for long-term archiving and enables you to search for files and find documents faster. Moreover, once you have found the text passage you want, you can simply copy it for reuse.

The bizhub LEGAL offers many other useful functions, such as red-lettering the beginning and end of a copied document to help you identify it more easily in court. The bizhub LEGAL can even be used as a central storage device for frequently used printouts and photocopies – so you never forget where you have stored document templates that are in regular use. The bottom line is that the bizhub LEGAL and its many customised lawyer-specific solutions will have a positive impact on your legal business.

Outstanding security you can trust

A networked, multifunctional device is a gateway to the Internet to handle sensitive client information day after day. So you most certainly need a device you can fully trust. The bizhub LEGAL is just such a device and will satisfy all your security requirements since it complies to the strict security standards of EAL3 Common Criteria (ISO 15408/IEEE 2600.1). A lock password prevents unauthorised access to the system's hard disk and all the data on the hard disk are fully encrypted. This means your data will not be compromised even if the hard disk is removed and installed in a different multifunctional device or PC. The bizhub LEGAL is a secure system you can totally rely on.

To see how the bizhub LEGAL can speed up, simplify and secure your business simply get in touch with us.
