KONICA MINOLTA

I WANT TO HAVE
ACCESS TO ALL INFORMATION IN LESS TIME

⬦ Find and aggregate all case information into a single, intuitive, searchable interface

For you as a legal professional, finding, accessing and processing the complete case-related information is decisive to early assessment and can be key to your success. Enterprise search software helps you to retrieve and compile relevant case information quickly and efficiently, increasing the billable hours and reducing the chance of working on incomplete or obsolete information.

ENTERPRISE
SEARCH SOFTWARE

Giving Shape to Ideas

Instant access and integrity of the information

Lawyers, legal assistants and legal secretaries spend extensive time trying to find all the relevant information on specific cases. Such searches are a hindrance to early case assessment and make legal discovery costs soar. The challenge is to obtain fast and easy access to the complete case data without the need to switch between user interfaces and applications and gain the security of accessing the data with integrity.

Konica Minolta's comprehensive Enterprise Search software supports legal professionals in finding and retrieving any type of data fast, uniting unconnected data stores, applications and databases into one universal index. Easily collect, preserve, cull and process electronically stored information (ESI) from a single point of access. The application reduces document review time, costs and risks, helping you and your legal team deliver better service and improve your results.

Key benefits

– **Saves time:** Identify all relevant ESI faster and more efficiently.
– **Total visibility:** Powerful OCR technology allows searching deep inside each file precisely for the required content.
– **Get a clearer picture during early case assessment:** Estimate your time, charges and risks more reliably early on.
– **Works the way you do:** There's no need to adopt new methods for saving and tagging; just leave files and data where they currently reside; the application will find and index your data no matter where it's hiding.
– **Secure access to authorised documents only:** Complies with whatever security scheme your firm has in place.
– **Single point of access:** Log in once and simultaneously search with the keywords of your choice across dozens of different data repositories. Fast one-click retrieval lets you access and open original source documents without knowing the file name or logging into the target app.
